

Jeevankumar O M

+91- 9842924330
jeevanom306@gmail.com

Experienced professional with over **2.9** years of expertise in Data Engineering and Software Engineer. Proficient in constructing intricate data pipelines and executing business requirements utilizing cutting-edge data tools.

Education

2016–2019 **Madurai kamarajar university, Madurai, BSC(CS).**

Technical Skills

Python, Pyspark, Databricks, Mysql, Django, Flask, FastAPI, Playwright, Github, Kafka, AWS, GCP, Azure

Work Experience

Aug 2022 – **Data Engineer**, OPTISOL BUSINESS SOLUTIONS, Madurai.
Ongoing

- Built complex data pipelines and implemented business need using the latest data tools such as AWS Glue, S3, Event bridge, Lambda, SNS
- Proficient in writing codes in SQL and Pyspark
- Experience in performing change data capture without the use of any third-party tools
- Expertise in performing data migration with ease irrespective of their size.
- Developed large dataset transformation using AWS databricks

Jan 2021 – **Software Engineer**, PROFIZIO IT SOLUTIONS, Madurai.
Aug 2022

- Independently managed a web application aligned with business requirements.
- Client interaction and gather requirements and present ideas
- Enabled seamless workflow automation by setting up a robust CI/CD pipeline using GitHub Actions and Docker.
- Utilized the Django web framework to craft several REST APIs.
- Deployed the software application into AWS EC2 instance.
- Developed comprehensive unit test cases using the pytest module.

Projects

Feb 2023– **CogoInsurance.**

- Ongoing Cogo Insurance is a Usage Based Insurance provider in the USA predominantly catering to trucks and heavy vehicles. Our objective is to identify driver's behavior based on telematics data and assign insurance premium based on that driver's behavior.
- Derived features such as hard acceleration, hard braking and hard cornerings to identify driving behavior.
 - Used 3rd party API's such as WeatherAPI to determine if a driver is driving in harsh weather conditions
 - Built a driver score calculation formula based on weighted average method using the derived features.
 - Setup a pipeline using AWS Glue to process the daily telematics data for around 20000 drivers and automatically calculate the driver score for those drivers and these driver score would be stored in AWS RDS MySQL database.
 - Built a FastAPI to fetch the driver scores based on driver ids from the AWS RDS database.

Sep 2022– **Neutrian.**

Jan 2023 The data lake is designed to store landed core data from the source system and the environment for data aggregation and correlation. The solution's main goal is to improve performance and efficiency of change data capture implementation

- Involved with the data Extraction, aggregations, and consolidation of sales data within databricks using PySpark.
- Designed and developed ETL Processes in Pyspark to migrate Campaign data from external sources like PostgreSQL into databricks Delta table.
- Designed and implemented a real-time data pipeline to process semi-structured data by integrating 150 million raw records from various data sources using Spark.

Jan 2022– Jul **H-BOT.**

2022 H-Bot version-1 collects, segregates, validates, and highlights the output in PDF without human intervention. This is the art of technology-driven services. It facilitates employers to engage their manpower's precious person-hours in productive/optimum utilization.

- Multiple PDF files will be integrated into the MySQL server and subsequently stored in an S3 bucket.
- Extracted and integrated multiple EPF and ESI PDF files from the S3 cloud storage.
- Employed the PYMUPDF library for efficient processing of PDF files, leveraging its impressive performance and superior rendering quality.
- Utilized Django's API to facilitate interaction with this model through a RESTful API, while Angular was employed to develop the chat window.

Jan 2021– **C-QUBE.**

Jun 2022 C-QUBE compliance check-version 1—cloud-based application is in line with the statutory applicability track, collects documents, validates, highlights, rectifies, and finally certifies the contractor's compliance month on month with less human effort. This is the edge of the technology- driven solution.

- Constructed PDF and Excel files for each uploaded contractor.
- Integrated Excel and PDF data, utilizing a Django REST API to validate against specific conditions and stored in Mysql
- Implemented a middleware using JWT tokens to enhance user login authentication.
- Created an administrative panel and dashboard using Django and Django Rest Framework.
- Successfully deployed the web application on an AWS EC2 instance and established a CI/CD pipeline.

Achievements

Oct 2023 **AWS Solution Architect - Associate.**

Jan 2023 **Dataricks Lakehouse Fundamental Certified.**

Jul-2022 **Hacker Rank Certified Python basics,** *Attained a 96 percentage proficiency in problem-solving using Python on the HackerRank platform..*
